ASC MACRO M10

ROAD SWEEPER

The ASC M10 road sweeper is a compact and highly manoeuvrable machine, designed to work in outdoor areas.

The machine is mostly used by municipalities and contractors alike, sweeping footpaths, car parks, walkways, sporting venues, stables and logistics facilities.

The machine is an outdoor suction sweeper that is designed to pick up paper, glass, leaves and dust.

The machine is designed to be highly manoeuvrable. It also features a one-piece single chassis. This makes the vehicle easy to turn, ensuring greater operator safety, visibility, weight distribution and machine stability.

An EASY START package is standard on the machine. By pressing the EASY START button, it automatically activates all the machine functions, simplifying operation. This greatly reduces operator training time.

NO Blockage system. 99% of sweepers suffer the age-old problem of suction mouth blockages. The M10 has addressed this issue, by designing a system whereby it can lift its suction mouth up to a metre off the ground. This allows for easy removal of debris obstruction easily, without the need to lie down under the machine and risk operator forearm cuts.

FEATURES

- A spacious, comfortable Cabin is standard. It caters for operators of different height, size and weight.
- The cabin is well insulated to cope with varying outside temperatures, noise and vibration, making long shifts less tiring.
- The engine has been deliberately placed in the centre of the chassis, ensuring the machine is away from dust and debris while working.
- Traction motor protected against impact, dirt, and humidity.
- This is designed to eliminate the age-old problem of blocked radiators and overheating hydraulics, common on 99% of rear mounted engines.
- Mid mounted side brooms ensure that the operators have 100% visibility while driving. This greatly increases driving safety, eliminating the distraction of the Operator looking at the ground suction brooms, while sweeping. This eliminates windscreen damage and also the prospect of running into cars and people, while sweeping.

EASY START

An EASY START package is standard on the machine. By pressing the EASY START button, it automatically activates all the machine functions, simplifying operation. This greatly reduces operator training time.

CABIN COMFORT

A spacious, comfortable Cabin is standard. It caters for operators of different height, size and weight. The cabin is well insulated to cope with varying outside temperatures, noise and vibration, making long shifts less tiring.

DIAGNOSTIC SYSTEM

The on board diagnostic system ensures that any failure, even those not perceived by the operator, are promptly reported. Thanks to the coding system, all you have to do is communicate to the service centre the code that appears on the display and the technicians will be ready to solve the problem.

NO BLOCKAGE SYSTEM

NO Blockage system. 99% of sweepers suffer the age-old problem of suction mouth blockages. The M10 has addressed this issue, by designing a system whereby it can lift its suction mouth up to a metre off the ground.
